

Pershing 80

Pershing presents to the international public the brand new Pershing 80', a model that openly challenges its category competitors by combining innovative design with distinctively sports style performance.

Here, the typical Pershing qualities of sporting style, speed and control have been further enhanced, as the new Pershing 80', brainchild of yacht designer Fulvio De Simoni, has once again been specifically designed to offer owners high performance. On the standard version, two powerful 2030 mhp MTU engines combine with ASD 15L surface propellers to guarantee a peak speed of 43 knots, whereas a faster version with two 2435 mhp MTU engines offers an incredible peak speed of 50 knots at 1/3 loaded displacement.

The craft's internal layout also reveals a series of refined features. The leather pilot house, for example, is a real gem designed exclusively by Poltrona Frau, who have once again partnered with Pershing on this splendid craft. Poltrona Frau, one of the world's best known leather furniture manufacturers, has in fact designed and crafted all the helm station seating and tops, from the dashboard to the central driver and two co-pilot seats.

Today, the new Pershing 80' is an example of how the shipyard continues to raise its standards in order to offer owners and guests a new way of "surprising the future" and to enhance the ultimate experience of luxury at sea.
